

Maintenance for your KÖB boiler

The first cold days are over and spring is just around the corner. We often don't realise how important boilers are until they break down. Regular maintenance is thus recommended to ensure the service life of your boiler is as long and fault-free as possible. This is why now is the right time to get your boiler ready for the winter by having it properly serviced. Carrying out regular checks increases operational safety, as well as ensuring optimum efficiency and low emissions.

Our Services

- Maintenance appointments are coordinated by Schmid and scheduled outside the heating season
- Free telephone support (during business hours)
- Regular inspection and maintenance (once a year) included:
 - Inspection and maintenance according to the inspection and maintenance checklist
 - Silo check according to the checklist
 - Annual inspection measurement (if contractually agreed)
 - Inspection of all other system components that are part of the boiler
 - Inspection of the safety equipment according to the checklist (on the water side, pressurised safety equipment must be checked by an installation specialist)
 - Functional check of the controller and control according to the checklist
- The contract can start at any time (any system age)
- Unlimited contract term (min. term of 1 year, can be terminated at any time)
- Working time and expenses of call-outs are included

Your benefits

- High level of operational safety and system availability
- Efficient and sparing operational use to extend the system's service life
- Highest possible technological and safety standard status
- Plan upcoming repairs proactively and keep unwanted shut-downs to a minimum
- Less planning and monitoring effort required from the system operator
